Compensation (National Compensation Survey)

A term used to encompass the entire range of wages and benefits, both current and deferred, that employees receive in return for their work. In the Employment Cost Index (ECI), compensation includes the employer's cost of wages and salaries, plus the employer's cost of providing employee benefits

1. How has the Employment Cost Index (ECI) changed?

The 2002 North American Industry Classification System (NAICS) has replaced the 1987 Standard Industrial Classification (SIC) system.

The 2000 Standard Occupational Classification System (SOC) has replaced the 1990 Occupational Classification System (OCS) based on the Census of Population

The index was rebased to December 2005=100.

New seasonal factors have been introduced.

A new imputation procedure utilizing additional information for estimating missing values has commenced.

New 2002 fixed employment weights have replaced the 1990 fixed employment weights that were used from 1995 through 2005.

Severance pay and supplemental unemployment benefit plans have been dropped.

Estimates for "Excluding incentive paid occupations" will be added.
