

## Preventive Drug List

Effective July 1, 2011

Maricopa County is offering a special benefit for certain prescription medications that can help keep you healthy. By managing your health before it becomes a problem, you may feel better and save money.

### About the Preventive Medication Benefit

Your plan offers a special benefit for certain prescription medications that may be recommended by your physician or other healthcare provider to prevent an illness or a medical condition. The Preventive Drug List (PDL) includes all of the preventive medications that are covered by your plan. This benefit does not include medications prescribed to treat an illness, injury, or condition that you already have.

Medications covered under the preventive care benefit may be used for the following purposes:

- Help prevent medical conditions such as blood clots, glaucoma, and osteoporosis
- Provide prenatal and well-child care
- Help prevent heart disease and reduce the risk of stroke
- Help people lose weight

This PDL was developed by Walgreens Health Initiatives, your health plan's pharmacy benefit manager. It was created under the direction of a committee of doctors and pharmacists in accordance with federal regulations that specify the types of medications your plan can cover without a deductible.

**Please note:** The PDL is subject to change without notice.

### How to Use Your Preventive Medication Benefit

If your doctor prescribes a medication on the PDL, there will be no charge for your prescription; it will be processed automatically at no cost to you. There are no claim forms to submit.

### How to Find Medications on the PDL

- Generic medications are listed in lowercase letters below the word generic. Not all generic medications available are listed.
- If a medication is used for more than one purpose, it will be listed under only one category; check different categories.

*All medications on this list have been approved by the FDA.*
