

# Arizona Department of Health Services - Heat Illness Prevention Toolkit for Schools

In response to the increasing rate of heat-related illnesses and deaths among US high school athletes, the Arizona Department of Health Services (ADHS) created the Heat Illness Prevention School Project (HIPSP). HIPSP is a toolkit for schools to inform students and school staff on recognition, prevention, and treatment strategies of heat-related illnesses. The materials can be used by anyone. The toolkit includes posters, fun activities, fact sheets, and an interactive online training hosted by the Centers for Disease Control and Prevention (CDC). To get a copy of the toolkit for your school: Please take a few minutes to fill out a short survey for the toolkit and provide your mailing address at the end of the survey. Visit:
