

# COVID-19 Daily Report

## Tuesday, April 14, 2020

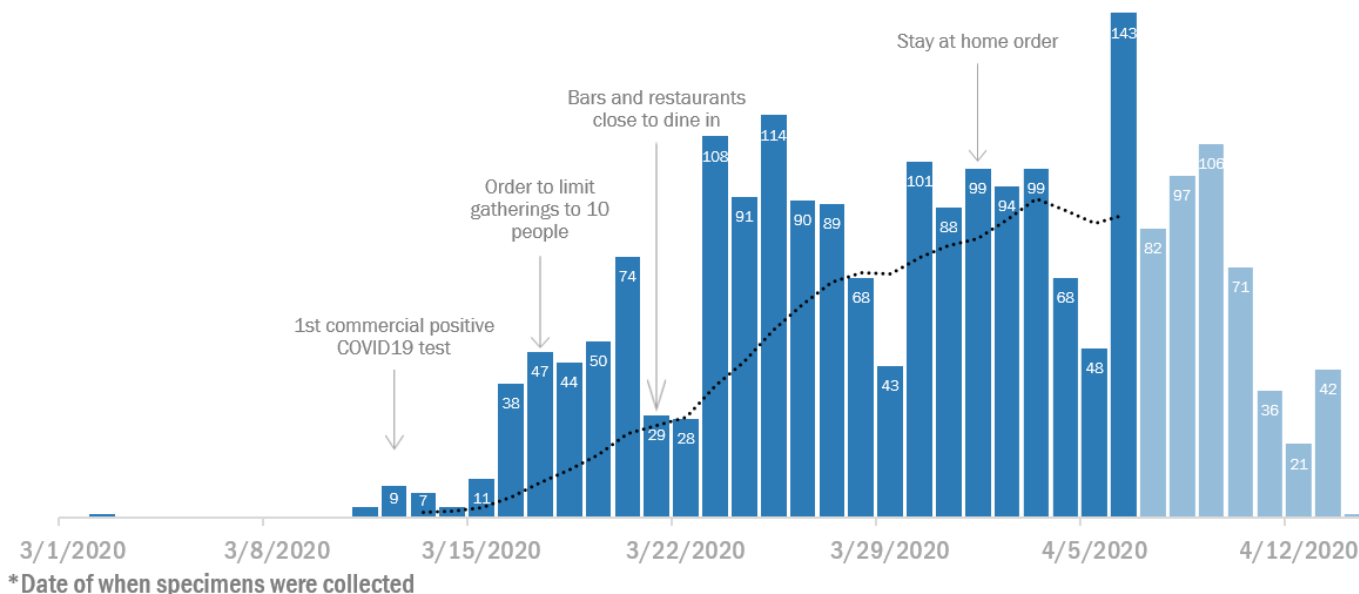

Maricopa County Department of Public Health

The number of **people diagnosed with COVID-19** in Maricopa County per day is increasing, which might be partially attributed to increased testing availability.

*Epi Curve by Daily Case Counts*

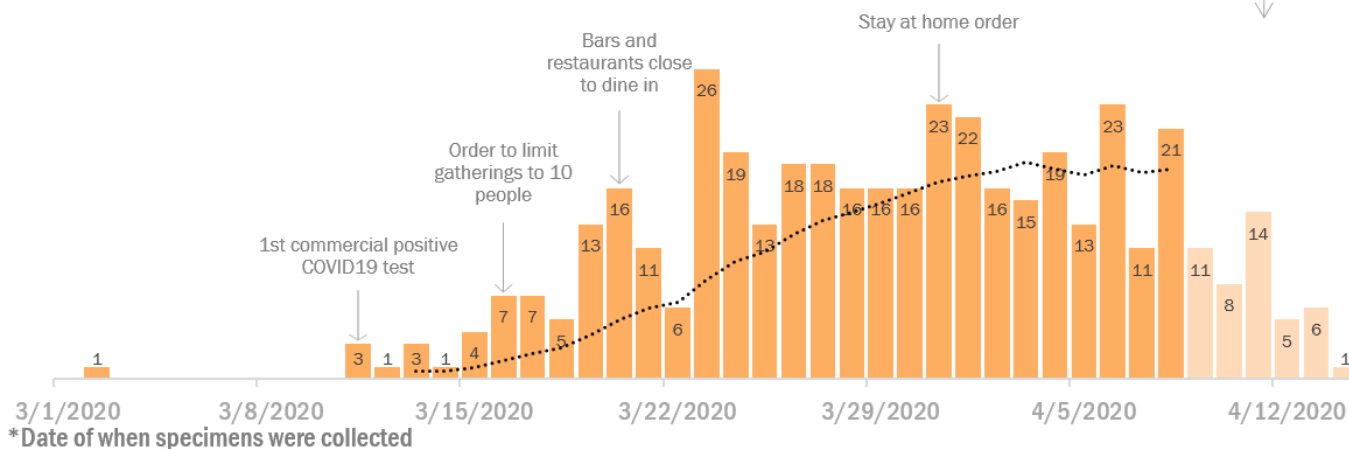

This number is likely to increase as there is an 8 day reporting delay from when specimens were collected.

The best way to track COVID-19 trends is to follow the number of **people hospitalized with COVID-19** because it does not change based on testing availability. **COVID-19 hospitalizations** are increasing but are starting to level off, which tells us that we need to keep doing what we are doing.

*Epi Curve by Hospitalizations*

This number is likely to increase as there is a 6 day reporting delay from when specimens were collected.

Due to a lack of testing availability, case counts only represent people who seek care and get diagnosed.

Most people with severe disease get tested.

Not everyone with mild disease is able to get tested.

These numbers present a more severe picture than what is actually happening in the community.

*Total Counts to Date*

	Total number of cases*		Cases as of yesterday	
	number	(%)	number	(change)
<b>Cases</b>	2145	(100%)	2056	(+89)
<b>Sex</b>				
Female	1086	(51%)	1024	(+62)
Male	1059	(49%)	1032	(+27)
<b>Age group</b>				
0-19 years	56	(3%)	55	(+1)
20-44 years	834	(39%)	811	(+23)
45-64 years	732	(34%)	698	(+34)
65+ years	523	(24%)	492	(+31)
<b>Hospitalized‡</b>	429	(20%)	406	(+23)
<b>ICU‡</b>	134	(6%)	130	(+4)
<b>Deaths</b>	60	(3%)	54	(+6)

The risk of being admitted to a hospital, Intensive Care Unit (ICU), or dying due to COVID-19 infection increases with **age**.

*Risk Severity by Age*

	0-19 years		20-44 years		45-64 years		65+ years	
	Total=56	(%)	Total=834	(%)	Total=732	(%)	Total=523	(%)
<b>Hospitalized</b>	1	(2%)	83	(10%)	149	(20%)	196	(37%)
<b>ICU</b>	0	(0%)	22	(3%)	49	(7%)	63	(12%)
<b>Died</b>	0	(0%)	1	(0%)	10	(1%)	49	(9%)

People who are 65+ years of age OR who have a chronic medical condition are at **highest risk** for severe disease.

Age and Chronic Health Condition

**42 long-term care facilities** have had at least one resident or staff with COVID-19.

Residents of long-term care facilities (including skilled nursing facilities, assisted living facilities, rehabilitation facilities, and hospice facilities) are at highest risk for severe outcomes from COVID-19 infection because they live in a communal setting and tend to be older with chronic medical conditions.

Long Term Care Facilities To-Date

Of 198 COVID-19 cases among residents, **65 (33%)** have been hospitalized and **32 (16%)** have died.

Of 110 COVID-19 cases among staff, **6 (5%)** have been hospitalized and **0 (0%)** have died.
