

COVID-19 Daily Report

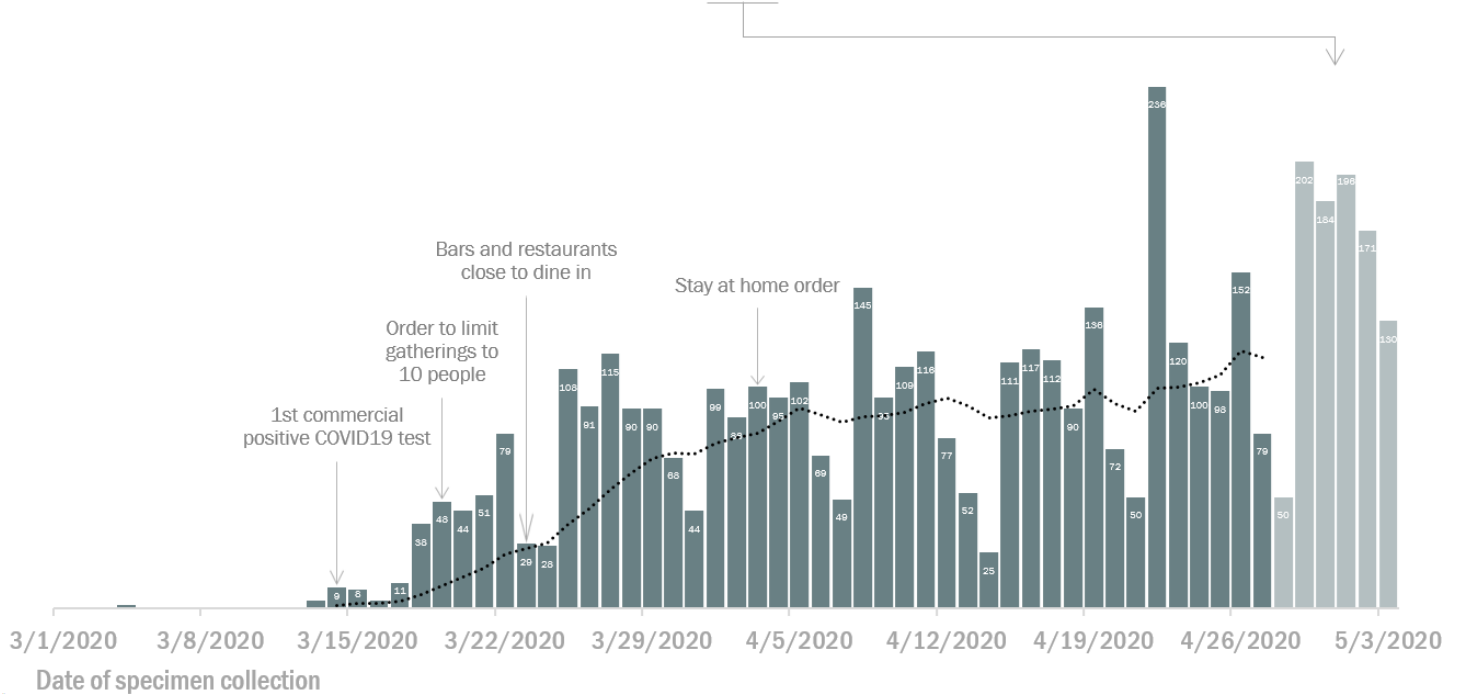

Sunday, May 3, 2020

Maricopa County Department of Public Health

The number of **people diagnosed with COVID-19** in Maricopa County per day is leveling off, but these numbers do not reflect testing ability.

Epi Curve by Daily Case Counts

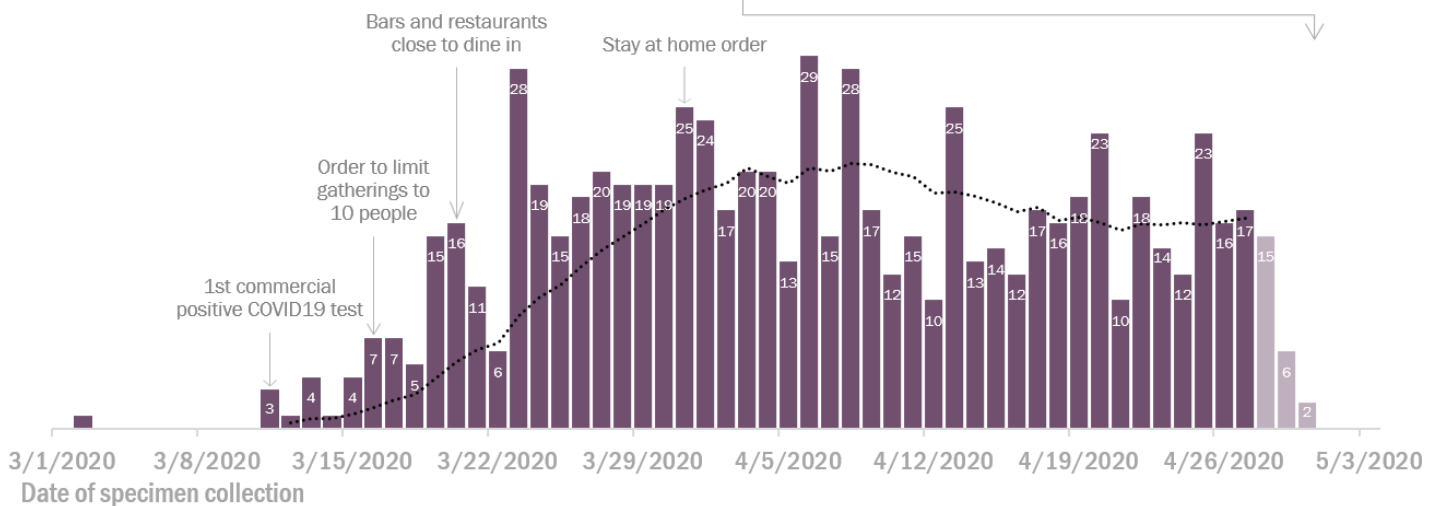

This number is likely to increase as there is an 8 day reporting delay from when specimens were collected.

The best way to track COVID-19 trends in Maricopa County is to follow the number of **people hospitalized with COVID-19** because it does not change with testing availability. **COVID-19 hospitalizations** are leveling off. This means what we are doing seems to be working and we need to continue social distancing.

Epi Curve by Hospitalizations

This number is likely to increase as there is a 6 day reporting delay from when specimens were collected.

Due to a lack of testing availability, case counts only represent people who seek care and get diagnosed. Most people with severe disease get tested. Not everyone with mild disease is able to get tested.

These numbers present a more severe picture than what is actually happening in the community.

	Total number of cases*		Cases as of yesterday		
	number	(%) (% overall)	number	(change)	(% change)
Cases	4618	(100%)	4484	(+134)	
Sex					
Female	2403	(52%)	2336	(+67)	
Male	2215	(48%)	2148	(+67)	
Age group					
0-19 years	215	(5%)	207	(+8)	
20-44 years	1731	(37%)	1661	(+70)	
45-64 years	1505	(33%)	1459	(+46)	
65+ years	1167	(25%)	1157	(+10)	
Hospitalized‡	754	(16%)	751	(+3)	
ICU‡	207	(4%)	207	(+0)	
Deaths	168	(4%)	168	(+0)	

*This is a rapidly-evolving situation. The Maricopa County case count might vary slightly from that of ADHS depending on the time of day data were downloaded. This breakdown includes all cases to date in the outbreak (1/22/2020 - present).

‡This count includes all cases ever hospitalized or admitted to the ICU during their illness.

The risk of being admitted to a hospital, Intensive Care Unit (ICU), or dying due to COVID-19 infection increases with **age**.

Risk Severity by Age

People who are 65+ years of age OR who have a chronic medical condition are at **highest risk** for severe disease.

Age and Chronic Health Condition

119 long-term care facilities have had at least one resident or staff with COVID-19.

Residents of long-term care facilities (including skilled nursing facilities, assisted living facilities, rehabilitation facilities, and hospice facilities) are at highest risk for severe outcomes from COVID-19 infection because they live in a communal setting and tend to be older with chronic medical conditions.

Long Term Care Facilities To-Date

Of 770 COVID-19 cases among residents, **185 (24%)** have been hospitalized and **112 (15%)** have died.

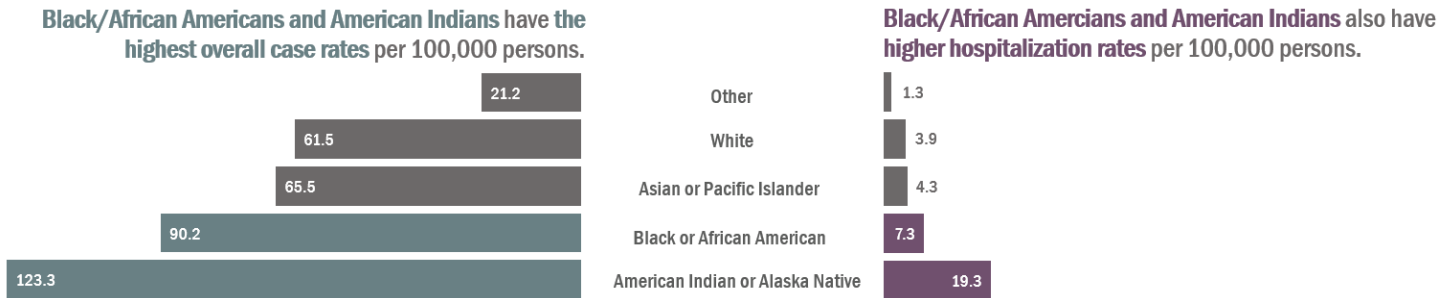

Of 339 COVID-19 cases among staff, **20 (6%)** have been hospitalized and **1 (0.3%)** has died.

Race and Ethnicity

Updated weekly; last updated 5pm 5/3/20

Note: Race information is only known for 55% of confirmed COVID-19 cases. Ethnicity information is only known for 59% of confirmed COVID-19 cases. Race/ethnicity data is usually self-reported to healthcare facilities or public health investigators and is optional to provide. Unknown data for race/ethnicity likely reflects differences in data collection and reporting systems. For these reasons, data provided below should be viewed as a limited picture of what is occurring in the community.

Race information is only available for 55% of confirmed COVID-19 cases reported to public health. About 45% of cases have unknown race status and are not reflected in this chart.

- » About **80%** of COVID-19 cases and **74%** of hospitalizations are white, compared with 80% of the total population in Maricopa County.
- » About **8%** of COVID-19 cases and **10%** of hospitalizations are Black or African American, compared with 6% of the total population in Maricopa County.
