

COVID-19 Daily Report

Wednesday, May 27, 2020

Maricopa County Department of Public Health

The number of **people diagnosed with COVID-19** in Maricopa County per day is steadily increasing. This is because more testing is being done in the community.

Epi Curve by Daily Case Counts

This number is likely to increase as there is an 8 day reporting delay from when specimens were collected.

The best way to track COVID-19 trends in Maricopa County is to follow the number of **people hospitalized with COVID-19**. This is because hospitalizations are not influenced by testing availability or by the addition of new types of tests. **COVID-19 hospitalizations** have leveled off likely due to social distancing efforts.

Epi Curve by Hospitalizations

This number is likely to increase as there is a 6 day reporting delay from when specimens were collected.

Case counts only represent people who seek care and get diagnosed. Often, people with mild disease are less likely to seek care and get tested. Case counts represent our confirmed cases: that is, people who have tested positive for COVID-19 with a PCR test (nasal swab).

These numbers present a more severe picture than what is actually happening in the community.

	Total number of cases*			Cases as of yesterday	
	number	(%)	(% overall)	number	(change)
Cases	8779	(100%)		8518	(+261)
Gender					
Female	4698	(54%)		4572	(+126)
Male	4081	(46%)		3946	(+135)
Age group					
0-19 years	672	(8%)		625	(+47)
20-44 years	3530	(40%)		3408	(+122)
45-64 years	2728	(31%)		2662	(+66)
65+ years	1847	(21%)		1820	(+27)
Unknown	2	(0%)		3	(-1)
Hospitalized‡	1436	(16%)		1119	(+317)
ICU‡	321	(4%)		311	(+10)
Deaths	386	(4%)		381	(+5)

*This is a rapidly-evolving situation. The Maricopa County case count might vary slightly from that of ADHS depending on the time of day data were downloaded. This breakdown includes all cases to date in the outbreak (1/22/2020 – present).

‡This count includes all cases ever hospitalized or admitted to the ICU during their illness.

The risk of being admitted to a hospital, Intensive Care Unit (ICU), or dying due to COVID-19 infection increases with **age**.

Risk Severity by Age

People who are 65+ years of age OR who have a chronic medical condition are at **highest risk** for severe disease.

Age and Chronic Health Condition

The **majority** of COVID-19 deaths in Maricopa County have occurred among **long-term care facility residents***.

Confirmed Deaths by LTCF Status

Residents of long-term care facilities* (including skilled nursing facilities, assisted living facilities, rehabilitation facilities, hospice facilities, group homes, and other congregate settings) are at highest risk for severe outcomes from COVID-19 infection because they live in a communal setting and tend to be older with chronic medical conditions.

198 long-term care facilities have had at least one resident or staff with COVID-19.

Residents of long-term care facilities (including skilled nursing facilities, assisted living facilities, rehabilitation facilities, hospice facilities, group homes, and other congregate settings) are at highest risk for severe outcomes from COVID-19 infection because they live in a communal setting and tend to be older with chronic medical conditions.

Long Term Care Facilities To-Date

Of 1289 COVID-19 cases among residents,
409 (32%) have been hospitalized and 275 (21%) have died.

Of 671 COVID-19 cases among staff,
51 (8%) have been hospitalized and 3 (0.4%) has died.

Race and Ethnicity

Updated weekly; last updated 5pm 5/24/20

Note: Race information is only known for 50% of confirmed COVID-19 cases. Ethnicity information is only known for 55% of confirmed COVID-19 cases. Race/ethnicity data is usually self-reported to healthcare facilities or public health investigators and is optional to provide. Unknown data for race/ethnicity likely reflects differences in data collection and reporting systems. For these reasons, data provided below should be viewed as a limited picture of what is occurring in the community.
