DUST CONTROL

The purpose of this flyer is to provide information to dust control permit holders. The information provided is not all inclusive of the site’s approved dust control plan. Please ensure you fully read, understand, and comply with the site’s dust control plan as you are still subject to the entirety of the permit and all applicable rules.

Tips to Avoid Common Air Quality Violations

- The dust control permit and dust control plan must be in a readily accessible location on site.
- Remember to submit a new dust control permit application 14 calendar days prior to the expiration date. Dust control permits are valid for one year from the date of issuance.
- Remember, a trackout control device is required for all sites that have a disturbed surface area greater than 2 acres, or haul more than 100 cubic yards any day.
- Trackout over 25 cumulative feet must be cleaned immediately.
- Keep the site’s disturbed surface areas stable by applying water or dust suppressant.
- Update the site’s dust control plan if any changes occur, including moving an exit or increasing the acreage of the site.

The dust control permit and dust control plan must be in a readily accessible location on site.

Recordkeeping Requirements

- Maintain daily self-inspection records each day dust-generating operations are conducted.
- Maintain a list of all employees with Rule 310 Basic and/or Comprehensive Dust Control Training.
- Maintain a list of all subcontractors conducting dust-generating operations on site.

Who needs Rule 310 Basic Dust Control Training?

- All water truck drivers
- On-site representatives with a disturbed surface area between one and five acres

Who needs Rule 310 Comprehensive Dust Control Training?

- Dust Control Coordinators
  - A dust control coordinator is required for sites with over five acres of disturbed surface area. Coordinators must have their valid Rule 310 Comprehensive Certification readily available and on site during all dust-generating operations.

Project Information Signs

- A project information sign is required for any site permitted for over five acres. The site’s permitted acreage can be found on the front page of the site’s permit.
- Post the project information sign where the public can easily view it, such as the site’s main entrance.
