

Study Purpose

The Maricopa County Department of Transportation (MCDOT) Transportation System Plan (TSP) 2040 will provide information on the current transportation system and set the framework of the future transportation system as population, development, technology, and other factors impact Maricopa County. The plan will address roadway needs, set performance measures, and provide a clear vision through 2040.

TSP 2035 focused on capacity-driven needs. TSP 2040 will incorporate recent MCDOT planning efforts to inform a broader scope of needs. The featured icons represent a sample of the many modes of transportation that will be considered as part of this plan.

TSP 2040 Is Planning For The Future:

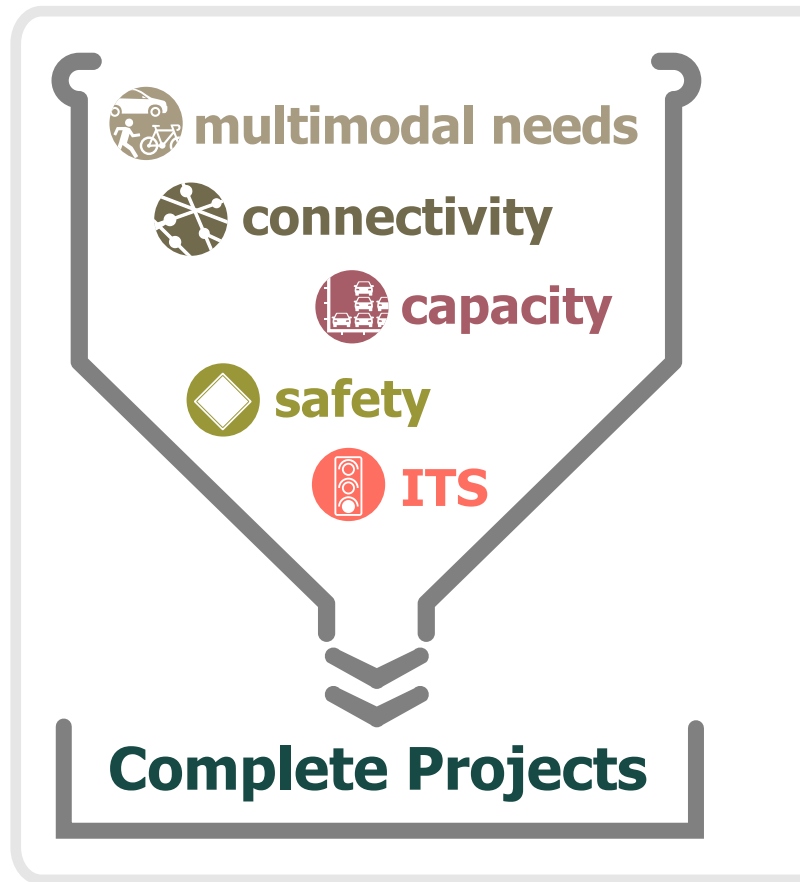

As part of this TSP effort, the following will occur:

- Examine Intelligent Transportation Systems (ITS) infrastructure in light of changing technologies (rideshare, connected and autonomous vehicles, and others)
- Engage public and stakeholders through interactive activities
- Identify complete projects addressing capacity, connectivity, safety, ITS, and multimodal needs
- Develop cost-constrained near term program

Study Area

The Study Area includes unincorporated Maricopa County and the Project Influence Area (PIA) includes the entire Maricopa County area and the fringe (areas adjacent to County limits) that connect to the County network. The primary focus will be on MCDOT facilities within the Study Area. However, some analysis will be conducted for the PIA to determine how MCDOT facilities are impacted by the region.
