Quarantine Guidance for Close Contacts of a Person with COVID-19*

Revised January 27, 2022 — Additional updates may occur as CDC finalizes its recent guidance.

Quarantine is for people who were close contacts to someone with COVID-19 but haven’t yet developed any symptoms of COVID-19** themselves. It prevents the spread of COVID-19 by asking people who might be infected to stay away from others until enough time has passed to be sure they don’t have COVID-19.

You are a close contact if you were within 6 feet of a person with COVID-19 while infectious for a cumulative total of 15 minutes or more over a 24-hour period, regardless of whether masks were worn, and might need to quarantine at home for at least 5 days following your last exposure.

Whether you need to quarantine and for how long depends on your COVID-19 vaccination status, recent infection history, and ability to wear a mask.

Follow the Quarantine Flow Chart on the back of this page to determine if you need to quarantine.

If you are in quarantine you should:

• Stay home and away from others for at least 5 days following your last exposure. Do not travel during this time.
• Get a PCR or antigen test at least 5 days after your last exposure. If you test positive, follow the isolation guidelines. You may travel after 5 full days following your last exposure if your test is negative and you do not have any symptoms**.
• For 10 days following your last exposure:
  o Avoid those at higher risk for getting very sick from COVID-19.
  o Wear a well-fitting mask when around others. You should not do things or go to places where you are unable to wear a mask (e.g., eating with others, going to restaurants, gyms, etc.).
  o Monitor yourself for symptoms consistent with COVID-19**. If you develop symptoms, you should get tested immediately with a PCR or antigen test, isolate, and follow isolation guidelines.
  o Do not travel if you did not get tested at least 5 days after your last exposure.
• If you cannot wear a mask, quarantine for 10 days following your last exposure. You may end quarantine early after 7 days if you received a negative test between days 5–7.

Even if you don’t need to quarantine you should:

• Get a PCR or antigen test at least 5 days after your last exposure. If you test positive, follow the isolation guidelines.
• Wear a well-fitting mask when around others for 10 days after your last exposure.
• Monitor yourself for symptoms consistent with COVID-19** for 10 days after your last exposure. If you develop symptoms, you should get tested immediately with a PCR or antigen test, isolate, and follow isolation guidelines.

Regardless of whether you need to quarantine, if you develop any symptoms consistent with COVID-19** in the 10 days following your last exposure, you need to:

• Isolate away from other people.
• Get a COVID-19 PCR or antigen test. This can be done at a healthcare facility, testing event, or at home. Call 2–1–1 to find a testing site.
• Follow the COVID-19 Home Isolation Guidance at: www.Maricopa.gov/COVIDIsolation

*This Quarantine guidance applies to most people under most circumstances. However, there are return-to-work guidelines for Healthcare Personnel and other Essential Workers:

• Other Essential Workers should follow the Essential Worker Quarantine Guidance at www.Maricopa.gov/COVID19essentialworkers.

**Symptoms of COVID-19 can range from mild to severe illness and may include:

• Cough
• Muscle or body aches
• Nausea or vomiting, diarrhea
• Shortness of breath or difficulty breathing
• Headache
• Sore throat, congestion or runny nose
• Fever or chills
• Fatigue (not as sole symptom in school setting)
• New loss of taste or smell.

Check the CDC website for the latest list of COVID-19 symptoms.
COVID-19 Home Quarantine Guidance Flow Chart
Revised January 27, 2022 — Additional updates may occur as CDC formalizes its latest guidance.

1. Symptoms of COVID-19 can range from mild to severe illness, may appear 2 to 14 days after exposure, and may include:
   - Cough
   - Shortness of breath or difficulty breathing
   - New loss of taste or smell
   - Fever or chills
   - Muscle or body aches
   - Headache
   - Nausea or vomiting, diarrhea
   - Sore throat
   - Fatigue (not as sole symptom in school setting)

2. Close Contacts are people who were within 6 feet of a person with COVID-19 while infectious for a cumulative total of 15 minutes or more over a 24-hour period, regardless of whether masks were worn. [Exception: in the K-12 setting, a student who was within 3-6 feet of an infected student is not considered a close contact if both students were engaged in consistent and correct use of well-fitting masks at all times. This exception does not apply to teachers, staff or other adults in the classroom setting.]

3. Previous COVID-19 infection means you previously tested positive for COVID-19 by PCR or antigen test, have recovered, and completed your isolation period within the last 90 days.

4. Up-to-Date with COVID Vaccinations means a person has completed all recommended COVID-19 vaccines that they are eligible to receive. As of 1/6/22, a person is Up-to-Date with their COVID vaccinations if they are:
   - 18 years of age or older and have completed a Primary Series and received a Booster dose when eligible.
   - 5-17 years of age and have completed a Primary Series of COVID vaccine.

Is your Primary Series of COVID vaccinations complete? For most people, you’ve completed a Primary Series if you have received any of the following:
   - One (1) dose of the J&J vaccine, or
   - Two (2) doses of the Moderna vaccine separated by at least 28 days, or
   - Two (2) doses of the Pfizer vaccine separated by at least 21 days.

For people who are moderately or severely immunocompromised, the Primary Series includes either:
   - One dose of the J&J vaccine, or
   - Two doses of the Moderna or Pfizer vaccines as described above plus an additional third dose of Moderna or Pfizer at least 28 days later.

Note: children ages 0-4 are not eligible for any COVID vaccination at this time.

Have you been Boosted? You have been Boosted if you completed your Primary Series (described above) and received an additional dose of a COVID vaccine (Pfizer and Moderna are preferred in most situations). Timing of the Booster dose depends on which vaccine you received for your Primary Series. If yours was with:
   - J&J vaccine - the Booster should have been received at least 2 months after the last dose of J&J in your primary series.
   - Moderna vaccine - the Booster should have been received at least 5 months after the last dose of Moderna in your primary series.
   - Pfizer vaccine - the Booster should have been received at least 5 months after the last dose of Pfizer in your primary series.

Note: children ages 12-17 may receive only the Pfizer vaccine as a Booster. Children ages 5-11 are not eligible for a Booster dose at this time.
